

Onboarding a New Artist to Google Calendar Sync

How to connect an artist's Google Calendar so their Booking Forms sync automatically — and how to authenticate the connection.

Applies to	Audience	Feature
Vocal Events Production & UAT	Salesforce Admin	Booking Form → Google Calendar Sync
1. How the sync works		1
2. Onboarding a new artist		2
3. Verifying it worked		4
4. Troubleshooting		5
5. Current artist reference table		6

1. How the sync works

Three things have to line up for an artist's calendar to receive events: a field on their Artist record telling Salesforce which calendar to write to, a Named Credential that knows how to authenticate to Google, and that Named Credential being authenticated against the artist's actual Google account. This guide walks through setting all three up for a new artist.

Fig. 1 — What has to be in place for a Booking Form to reach Google Calendar.

WHERE THE "ONE-TIME" WORK ALREADY HAPPENED

A shared Google Cloud OAuth Client and Salesforce Auth Provider (`GoogleCalendarAuthProvider`) were already set up once for the whole org — you don't need to touch either of those to onboard a new artist. Section 5 covers them for reference only, in case they ever need to be recreated.

2. Onboarding a new artist

Repeat this whenever a new artist needs their calendar connected. Steps 3–4 are the only ones that must be redone for every artist; Step 2 is only needed the first time an artist is connected.

1

Get the artist's Google Calendar email address

This is the Gmail account whose calendar will show their shows — usually the same account Vocal Events already logs into on their behalf. Confirm it directly with the artist or agent if you're not sure; writing the wrong address here means events go to the wrong calendar.

2

Only for a brand-new artist: create their Named Credential pair

Each artist needs their own Named Credential + External Credential pair (this is what lets Salesforce authenticate to their specific Google account separately from everyone else's). This is a metadata change, not something done from a record — ask your Salesforce developer to add a pair named to match the pattern already in use:

```
GoogleCal_<ArtistKey>_NamedCred
GoogleCal_<ArtistKey>_ExtCred
```

If two artists share one calendar (e.g. a duo act), you can reuse an existing pair instead of creating a new one — see Section 5's table for what already exists.

3

Fill in the two fields on the Artist record

Open the artist in Salesforce and set:

FIELD	VALUE
Google Calendar Id	the Gmail address from Step 1
Google Calendar Named Credential	the exact API name from Step 2, e.g. GoogleCal_RicusNel_NamedCred

ARTIST RECORD — DETAIL

Google Calendar Id

ricusnel7@gmail.com

Google Calendar Named Credential

GoogleCal_RicusNel_NamedCred

Google Calendar Status

Never Synced

read-only — set automatically once the sync runs

Fig. 2 — Example of the two fields filled in on an Artist record (illustrative, not a live screenshot).

4

Authenticate the Named Credential

This is the step that actually links Salesforce to the artist's Google account. It has to be done once per artist by whoever is logged into that artist's Gmail (usually you, on Vocal Events' shared devices).

Fig. 3 — Setup navigation and the Google consent step (illustrative, not a live screenshot).

"GOOGLE HASN'T VERIFIED THIS APP" WARNING

This is expected and safe to click through — Vocal Events' Google Cloud project hasn't gone through Google's full public-app verification, since only Vocal Events' own artist accounts ever authenticate against it. Click **Advanced**, then **Go to Vocal Events (unsafe)**, then continue to **Allow**. If this warning doesn't appear at all, that's fine too — it only shows for accounts that haven't consented before.

5

Optional: backfill the artist's existing bookings

New artists onboarded going forward will sync automatically the moment a Booking Form is created or changes. If the artist already has upcoming (or past) Booking Forms that should also show on their calendar, ask your developer to run:

```
Database.executeBatch(new GoogleCalendarInitialSyncBatch(artistId), 25);
```

— scoped to just that artist, so it only touches their bookings.

3. Verifying it worked

The **Vocal Events Google Calendar Sync Dashboard** gives an at-a-glance view of every artist's connection status. Find it under the **Public Dashboards** folder in the Dashboards tab.

Fig. 4 — Expected status progression for a newly-onboarded artist.

To confirm end-to-end: create a test Booking Form for the artist (Stage = New) and check their calendar for an all-day event titled "{Town} – TBC". Move the Stage to Confirmed and confirm the title updates to just "{Town}". Cancel it and confirm the event disappears.

4. Troubleshooting

An artist shows "Sync Failing" on the dashboard

Open one of their affected Booking Forms and check the `Google Calendar Sync Error` field — it holds the exact error from the last failed attempt. Common causes:

SYMPTOM	LIKELY CAUSE
401 / invalid_grant errors	The artist revoked access, or hasn't re-authenticated after changing their Google password — redo Step 4.
404 on update	Self-healing — the sync recreates the event automatically on the next attempt.
Error mentions the Named Credential name	Check <code>Google Calendar Named Credential</code> on the Artist record for a typo.

You should already be getting an email about failures

Any sync failure automatically emails whoever is set in `Vocal Events Settings → Integration Alerts Email` (Setup → Custom Settings → Vocal Events Settings → Manage → Org Default). If that's not populated yet, failures won't be emailed anywhere — they'll only be visible on the dashboard and on the individual Booking Form.

Retrying every currently-failing booking at once

Ask your developer to run:

```
Database.executeBatch(new GoogleCalendarInitialSyncBatch(null, true), 25);
```

This re-attempts every booking currently marked as failing, across all artists, without touching anything that's already working.

5. Current artist reference table

The Named Credential / External Credential pair already created for each artist as of this integration's rollout. Reuse the matching pair rather than creating a new one for these artists.

ARTIST	NAMED CREDENTIAL
Danny Smoke	<code>GoogleCal_DannySmoke_NamedCred</code>
Dassie	<code>GoogleCal_Dassie_NamedCred</code>
FATMAN	<code>GoogleCal_FATMAN_NamedCred</code>
Hammie / Annarie (Hamilton Wessels)	<code>GoogleCal_HammieAnnarie_NamedCred</code>
Jakkals Vibes	<code>GoogleCal_JakkalsVibes_NamedCred</code>
Liza Nel	<code>GoogleCal_Liza_NamedCred</code>
PROP	<code>GoogleCal_PROP_NamedCred</code>
Reandi Grey	<code>GoogleCal_ReandiGrey_NamedCred</code>
Ricus Nel	<code>GoogleCal_RicusNel_NamedCred</code>
Rooksein	<code>GoogleCal_Rooksein_NamedCred</code>

One-time org setup (reference only)

These were already configured once for the whole org and shouldn't need to change when onboarding an artist. Recorded here in case this ever needs rebuilding (e.g. a sandbox refresh):

ITEM	VALUE / LOCATION
Auth Provider	<code>GoogleCalendarAuthProvider</code> (Setup → Auth. Providers)
OAuth scope	<code>openid email profile https://www.googleapis.com/auth/calendar.events</code>
Authorize URL params	<code>access_type=offline&prompt=consent</code> — required so Google actually issues a refresh token
Callback URL (per org)	<code>https://<My Domain>/services/authcallback/GoogleCalendarAuthProvider</code> — register this in the Google Cloud OAuth Client for each org (Production, UAT, etc.)
Alerts recipient	<code>Vocal Events Settings → Integration Alerts Email</code> (Custom Setting, Org Default)
